## Weekly Market Commentary

### January 11, 2016

#### The Markets

The People's Bank of China (PBOC) started the New Year with a downward currency adjustment and fireworks followed.

Last week, three distinct issues affected China's stock market. First, the PBOC's devaluation of the yuan (a.k.a. the renminbi), along with the knowledge the central bank had been spending heavily to prop up its currency in recent months, led many analysts and investors to the conclusion China's economy might not be as robust as official reports indicated, according to the *Financial Times*.

Not everyone was surprised by this revelation. During the fourth quarter of 2015, *The Conference Board's* working paper entitled *Global Growth Projections for The Conference Board Global Economic Outlook 2016* reported:

“China's economy grew much slower than the official estimates suggest in the recent years. During the last five years, our estimates suggest an average growth of 4.3 percent, which is substantially lower than the official estimate of 7.8 percent. In 2015, we project China to see an average growth of 3.7 percent, which is indeed lower than the official target of 7 percent.”

Second, state-run media made it clear the Chinese government would not step in to spur growth. Allowing market forces to play out is a requirement of the reforms international investors have been demanding of China, according to *Barron's*. The publication suggested Chinese President Xi Jinping is the victim of a Catch-22. The Chinese government took steps toward reform and international investors responded by selling shares in a panic:

“Weaning China off excessive credit, investment and import-led growth in favor of services means slower growth. Markedly slower, in fact, than the 6.5 percent Beijing is gunning for this year. But Monday's 7 percent stock rout shows international investors want it both ways. The rapid growth, innovation, and disruptive forces that capitalism produces? Yes. The downturns and volatility that come with it? Not so much.”

The third factor was China's new and very strict stock market circuit breakers, which were introduced on January 4. The circuit breakers were intended to calm overheated markets, but they sparked panicked selling instead. When the Shanghai Shenzhen CSI 300 Index falls 5 percent, Chinese stock trading stops for 15 minutes. When the index is down 7 percent, trading stops for the day. A similar mechanism is employed in U.S. markets, which are far less volatile. However, trading is not delayed until the Standard & Poor's 500 index has fallen by 7 percent, and it does not stop until the index is down by 20 percent. Last week, China's stock markets closed twice as investors, who were worried the circuit breakers might kick in, rushed to sell shares.

China suspended its circuit breakers on Thursday, and the PBOC set the value of the yuan at a higher level. That helped China's stock markets, and others around the world, settle. China's markets gained ground on Friday, although U.S. markets finished the week lower. Markets may continue to be jittery next week as "a tsunami of negative psychology driven by China" works its way through the system, reported *Reuters*.

Data as of 1/8/16	1-Week	Y-T-D	1-Year	3-Year	5-Year	10-Year
Standard & Poor's 500 (Domestic Stocks)	-6.0%	-6.0%	-6.8%	9.7%	8.7%	4.1%
Dow Jones Global ex-U.S.	-6.1	-6.1	-11.1	-2.6	-2.0	-0.5
10-year Treasury Note (Yield Only)	2.1	NA	2.3	1.9	3.3	4.4
Gold (per ounce)	3.7	3.7	-9.4	-12.7	-4.2	7.4
Bloomberg Commodity Index	-2.3	-2.3	-26.0	-17.8	-13.5	-7.6
DJ Equity All REIT Total Return Index	-3.0	-3.0	-4.6	8.8	11.1	6.5

S&P 500, Dow Jones Global ex-US, Gold, Bloomberg Commodity Index returns exclude reinvested dividends (gold does not pay a dividend) and the three-, five-, and 10-year returns are annualized; the DJ Equity All REIT Total Return Index does include reinvested dividends and the three-, five-, and 10-year returns are annualized; and the 10-year Treasury Note is simply the yield at the close of the day on each of the historical time periods.

## FOURTH QUARTER, A LOOK BACK...

**The Federal Reserve pulled the trigger.** At the December Federal Open Market Committee meeting, the Fed finally acted, tightening monetary policy by raising the funds rate from 0.25 percent to 0.50 percent. It's important to remember the Fed doesn't actually set interest rates. It takes actions designed to influence financial behaviors. The Fed has given rates a push, it remains to be seen whether its efforts will bear fruit.

**The European Central Bank (ECB) acted, too.** Although, its monetary policy moved in a different direction, offering additional stimulus measures to support European economies. Investors were enthusiastic when the ECB announced its intentions; however, markets were underwhelmed when the economic measures delivered were less stimulative than many had expected.

**China's currency gained status.** The International Monetary Fund decided to add the Chinese yuan (a.k.a. the renminbi) to its Special Drawing Rights basket, effective October 1, 2016. After the renminbi is added, the U.S. dollar will comprise 42 percent of the basket, the euro will be 31 percent, the renminbi will be 11 percent, the Japanese yen will be 8 percent, and the British pound will also be 8 percent.

**Congress tweaked Social Security.** The Bipartisan Budget Act of 2015 (BBA) averted a U.S. default and deferred further discussion of U.S. debt and spending levels until after 2016's presidential and congressional elections. It also did away with two popular social security claiming strategies. The restricted application strategy was discontinued at the end of 2015, and file and suspend strategies will be unavailable after May 1, 2016.

**Medicare premiums go up, but not for everyone.** The BBA also limited increases in Medicare premiums. About 14 percent of Medicare beneficiaries will pay higher premiums in 2016. The

new premium will be \$121.80, up from \$104.90 in 2015. Original proposals suggested the premium amount increase to \$159.30.

## **Weekly Focus – Think About It**

“If you do not change direction, you may end up where you are heading.”

*--Lao Tzu, Chinese philosopher*

\* Government bonds and Treasury Bills are guaranteed by the U.S. government as to the timely payment of principal and interest and, if held to maturity, offer a fixed rate of return and fixed principal value. However, the value of fund shares is not guaranteed and will fluctuate.

\* Corporate bonds are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate and credit risk as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity, and redemption features.

\* The Standard & Poor's 500 (S&P 500) is an unmanaged group of securities considered to be representative of the stock market in general. You cannot invest directly in this index.

\* The Standard & Poor's 500 (S&P 500) is an unmanaged index. Unmanaged index returns do not reflect fees, expenses, or sales charges. Index performance is not indicative of the performance of any investment.

\* The Dow Jones Global ex-U.S. Index covers approximately 95% of the market capitalization of the 45 developed and emerging countries included in the Index.

\* The 10-year Treasury Note represents debt owed by the United States Treasury to the public. Since the U.S. Government is seen as a risk-free borrower, investors use the 10-year Treasury Note as a benchmark for the long-term bond market.

\* Gold represents the afternoon gold price as reported by the London Bullion Market Association. The gold price is set twice daily by the London Gold Fixing Company at 10:30 and 15:00 and is expressed in U.S. dollars per fine troy ounce.

- \* The Bloomberg Commodity Index is designed to be a highly liquid and diversified benchmark for the commodity futures market. The Index is composed of futures contracts on 19 physical commodities and was launched on July 14, 1998.
- \* The DJ Equity All REIT Total Return Index measures the total return performance of the equity subcategory of the Real Estate Investment Trust (REIT) industry as calculated by Dow Jones.
- \* Yahoo! Finance is the source for any reference to the performance of an index between two specific periods.
- \* Opinions expressed are subject to change without notice and are not intended as investment advice or to predict future performance.
- \* Economic forecasts set forth may not develop as predicted and there can be no guarantee that strategies promoted will be successful.
- \* Past performance does not guarantee future results. Investing involves risk, including loss of principal.
- \* You cannot invest directly in an index.
- \* Consult your financial professional before making any investment decision.
- \* Stock investing involves risk including loss of principal.
